

BRIEF INFORMATION ABOUT ELECTIVE FOCUS IN B.E. (CHEMICAL ENGINEERING)

B.E. Chemical Engineering program is designed to offer elective focus (EF) after student clears semester VI (3rd year) of the program. Student has to choose EF out of the following three choices:

- Energy
- Materials
- Petroleum

The student will be given their choices based on after 2nd year CGPA. The choice of elective courses and the project work will be related to the EF chosen. Thus a student will graduate with a B.E. Chemical Engineering degree alongwith a EF certificate in the chosen area in Energy/Materials/Petroleum.

The additional EF certificate will give an edge to the student in placements and career growth, and also better opportunities for pursuing higher studies in the EF area.
